

16-BIT MULTIPLICATION

EXP NO: 7

AIM: To write an assembly language program to implement 16-bit multiplication using 8085 processor.

ALGORITHM:

- 1) Load the first data in the HL pair.
- 2) Move the content of the HL pair to the stack pointer.
- 3) Load the second data in the HL pair and move it to DE.
- 4) Make H register as 00H and L register as 00H.
- 5) ADD HL pair and stack pointer.
- 6) Check for carry if carry increment it by 1 else move to next step.
- 7) Then move E to A and perform OR operation with accumulator and register D.
- 8) The value of operation is zero, then store the value else go to step 3.

PROGRAM:

```
LHLD 2050

SPHL

LHLD 2052

XCHG

LXI H,0000H

LXI B,0000H

AGAIN: DAD SP

JNC START

INX B

START: DCX D
```

MOV A,E

ORA D

JNZ AGAIN

SHLD 2054

MOV L,C

MOV H,B

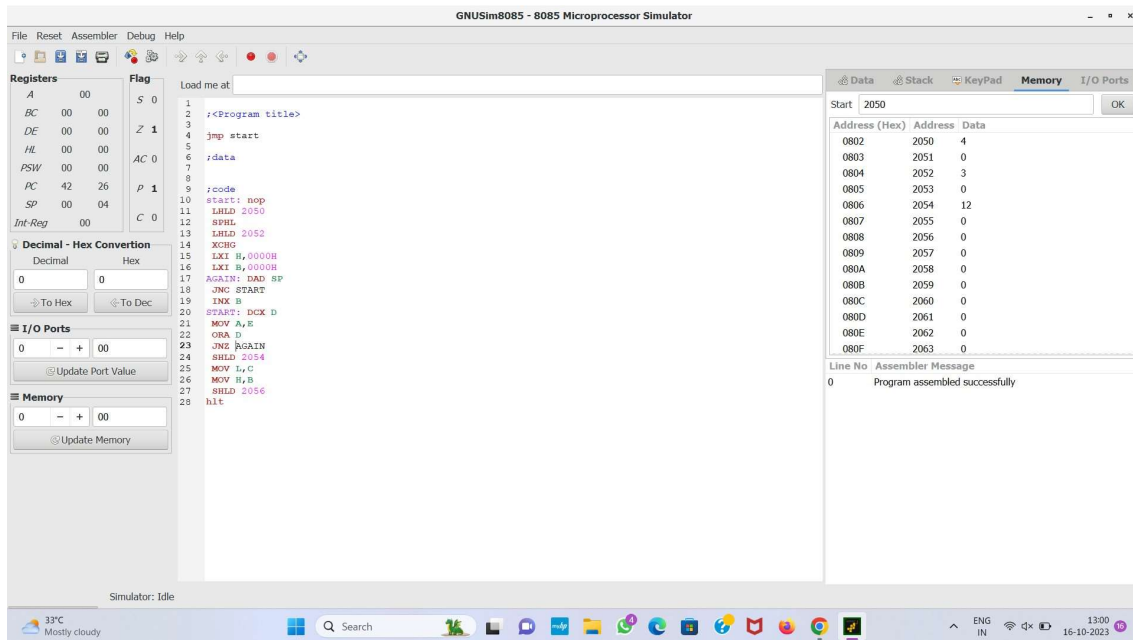

SHLD 2056

HLT

INPUT:

| Start | 2050 | OK |
|---------------|---------|------|
| Address (Hex) | Address | Data |
| 0802 | 2050 | 4 |
| 0803 | 2051 | 0 |
| 0804 | 2052 | 3 |
| 0805 | 2053 | 0 |

OUTPUT:

RESULT: Thus
the program was executed successfully using 8085 processor simulator.
